# POINTS TO CONSIDER WHILE CHOOSING MOPPING TOOLS:

## GENERAL MOPPING

Choose mops with a high level of release, absorbency, and durability. Launderable mops will be the most cost-effective option if it is possible. The highest performance and machine washability are found in synthetic, rayon, and blended ber mops with looped ends and braided tailbands.

## FINISH MOPPING

For high absorbency and release, look for mops made of rayon or synthetic materials. Construction features like tailbands and looped ends will improve floor coverage and reduce streaking.

## RELEASE

A mop's capacity to "release" liquid onto the floor or while being wrung out. Greater levels enable more efficient application of cleaning agents to the floor as well as faster and more thorough wringing. The best liquid release is provided by rayon and synthetic fibres.

## DURABILITY

A mop's durability refers to how long it will work before needing to be changed. Mops made of synthetic or mixed fibres are the most robust. Because the bacterial development that results in mop odour and discoloration is inhibited by antimicrobial fibres, mops using these materials last longer.

## LAUNDERABILITY

The number of commercial washing and drying cycles a mop can survive before its structure degrades or its performance suffers is used to determine how easily it can be washed. The most machine-washable ber mops are synthetic and mixed.

## ABSORBENCY

The capacity of a mop to pick up and hold liquid is referred to as its absorbency. Faster floor drying times are possible at higher levels, which boosts production and improves worker security. The most absorbent yarns are made of rayon and cotton.

## Technical icons

Rossari products hold a high standard of quality, which means low costs for you in both the short and longterm. The technical icons may show both recommended cleaning methods and laundry advice. Follow the recommendations to get full value from our product.
